

ACC. LADDERS

Accommodation ladders from Lemvig Maskin- & Køleteknik ApS can be operated by a single person, and are produced for easy installation onboard the ship.

Our accommodation ladders are as standard provided with nylon wheels, loose stanchions with hand rope or foldable railings in aluminum, with our unique handrail profile. Also a complete davit arrangement, with winch, 180° rotatable platform, and davits in hot-galvanized steel are provided as standard equipment.

Of attachment possibilities we have as our standard fixing bracket with axle in stainless steel. Also we have our unique locking-hook which locks the ladder when in use and tilted in angles between 0° to 50°.

The curved-steps in extruded-profile, with non-skid walk-surface, gives a safe working-angle from 20° to 50°.

We are also able to manufacture acc. ladders after client's specifications and drawings.

Among other specifications, we can also provide Telescopic accommodation-ladders.

All our accommodation ladders are Load tested according to Danish Maritime Authority and ISO 5488 and are delivered with a Load Test Report, that proves that the ladder has passed the required load test.
